

Cloud computing terminology

C

Cloud

The cloud is a network of powerful computers known as servers that store and manage data.

Cloud as a service

Cloud as a service refers to a set of services delivered over the cloud, allowing businesses and individuals to rent computing resources, such as infrastructure, platforms, or software, on demand.

Cloud computing

Cloud computing refers to storing, processing, and accessing information over the internet instead of on a computer's hard drive.

Cloud deployment

Cloud deployment refers to the method of making cloud computing resources available to users and organizations.

F

Function as a service (FaaS)

Function as a service (FaaS) is a cloud computing model that allows users to execute individual functions or pieces of code in response to events.

H

Hybrid cloud

A hybrid cloud is a cloud deployment model that combines elements of both public and private clouds, allowing data and applications to be shared between them.

I

Infrastructure as a service (IaaS)

Infrastructure as a service (IaaS) is a cloud computing model that provides users with virtualized computing resources over the internet.

M

Multicloud

Multicloud is the use of more than one public cloud.

O**Off premises**

Off premises is a solution where an organization's IT resources are hosted outside its own facilities, often by a third-party cloud provider.

On premises

On premises is a solution where an organization hosts its IT infrastructure within its own facilities.

P**Physical server**

A physical server is a dedicated machine, a tangible computer that is used exclusively by a specific group of users or for a particular type of data.

Platform as a service (PaaS)

Platform as a service (PaaS) is a cloud computing model that provides users with a platform to develop, run, and manage applications.

Private cloud

A private cloud is a type of cloud deployment model where the infrastructure, resources, and services are dedicated to a single user or organization.

Public cloud

A public cloud is a type of cloud deployment model where services, such as storage, applications, and processing power, are delivered over the internet and made available to the general public or multiple organizations.

S**Software as a service (SaaS)**

Software as a service (SaaS) is a model of cloud computing where software applications are delivered over the internet.

V**Virtualization**

Virtualization is the process of dividing a physical server into multiple virtual servers.

Virtual server

A virtual server is like a slice of a physical server. It is a software-controlled segment created through virtualization.
